Great Place To Work®
Certified
JUL 2019–JUL 2020
USA

Pinnacle 21 is an established startup that builds software to streamline the drug approval process, bringing life-saving medicines to patients faster.

Principal Software Consultant

At Pinnacle 21, we are always looking for exceptional team members. Our engineering team is still in its early stages, meaning you will be crucial to shaping the future of this company. As we plan to make a lasting impact on the pharmaceutical industry we're looking for a motivated member to take part in fostering one of the top companies in Philadelphia!

Work that matters We work with the pharmaceutical industry to streamline the drug approval process, bringing life-saving medicines to patients that need them. What you'll be doing is a lot more important than building a shopping cart.

Work autonomously Enjoy an autonomous environment, where we'll support your continuous improvement and foster your capabilities to produce high quality code at a rapid pace.

Global footprint We support a community of users from countries across the world that widely regard our software as the industry standard for clinical submission preparation.

What you'll be doing

Our technical consultants are working to solve complex problems in clinical data processing, standardization, and integration. You will be part of a small agile team that is responsible for designing, developing, testing, maintaining, and improving your projects. You will be encouraged to exceed expectations, which is a requirement to succeed in a small team that is constantly working on new challenges. You will have a chance to research new technologies if they are the best solution to a problem, but you will also be expected to learn and use existing solutions when it makes sense. You and your teammates will be equipped with the best hardware and software available.

What we're looking for

Must

- Fluency with many of our key product technologies (SQL, Java, JavaScript, Play, React)
- 10+ years of experience as a technical consultant in the Life Sciences industry
- Ability to give the customer what they want without polluting the primary product codebase
- Have experience in at least one other general-purpose programming language; including but not limited to Scala, Python, .NET, Ruby, etc
- Experience as primary client technical point of contact
- Project management and business analysis skills
- Have experience with RESTful API design and development
- Have experience using version control (preferably, git)
- Be able to write useful test cases
- Be smart, and get things done
- Be passionate about software development

A bit about us

Pinnacle 21 is a startup making a big impact on regulatory review processes. Our flagship software provides the biopharmaceutical industry with the key to a fast, efficient drug review process. It's this technology that drives FDA's 21st Century Review Initiative, ensuring that submission data is compliant, useful and ready for review — which enables a more efficient review process.

At the core of our company is our open-source project called Pinnacle 21 Community. We support users from the FDA, PMDA (Japanese Pharmaceutical Regulatory Agency), and almost every pharmaceutical company preparing a clinical submission. Building on top of this wide network, we continue to expand into new opportunities and grow our business.
